

ADVANCED METRICS DEVELOPMENT

Eliminate
external BI
tools

Better cross-
team
visibility

Maintain
trusted
legacy
metrics

Design, preserve, and centralize metrics that matter most to your business

Standard supply chain metrics don't always capture the insights leaders need. Legacy KPIs may need to be preserved, while new custom metrics can surface critical information that standard reports miss. Without support, these measures are often inconsistent, hard to maintain, or spread across multiple tools. LeanDNA helps create, preserve, and centralize the right metrics so leadership teams can trust and act on their data.

How LeanDNA Helps

- Design bespoke metrics when standard options don't meet needs
- Replicate legacy KPIs to preserve historical continuity
- Consolidate metrics in LeanDNA for centralized visibility
- Deliver custom dashboards with automated refreshes and remote access
- Eliminate or reduce reliance on external BI tools or analyst support

What's Included

Current state assessment: review existing metrics, accuracy, and reporting process

Gap analysis: identify gaps between legacy metrics and LeanDNA's offerings

Bespoke metric design: define key parameters, calculations, and data sources

Implementation: embed metrics in LeanDNA or integrate via API

Governance: ensure metrics remain accurate and routinely updated
