

DATA HEALTH & OPTIMIZATION

Cleaner ERP data

Fewer shortages & delays

Improved automation readiness

Strengthen your ERP foundation with accurate, reliable, and actionable data

ERPs depend on accurate data, yet gaps and errors accumulate as items move between buyers, suppliers, and systems. These issues compound over time, turning small inaccuracies into major risks for material availability, delivery, and supply chain execution. We help identify, prioritize, and resolve data problems so teams can operate with confidence and unlock the full value of their ERP and LeanDNA investments.

How LeanDNA Helps

- Perform health checks during each ERP sync to flag missing, conflicting, or illogical data
- Review and validate data issues during implementation to guide cleanup priorities
- Determine which problems can be solved through mapping, ERP corrections, or workarounds
- Support cleanup efforts when issues or deadlines exceed internal capacity
- Build custom mappings, algorithms, or features to address missing or bad data

What's Included

Comprehensive Data Assessment: full analysis of ERP data health & parameters

Custom Dashboards & Metrics: visibility into data health KPIs and issue tracking

Quick-Win Fixes: resolve critical errors to cut shortages and excess

Optimization Guidance: parameter tuning and cross-site data evaluation

Governance: ongoing reviews to ensure reliable ERP data
